DPPUMPS GROUP

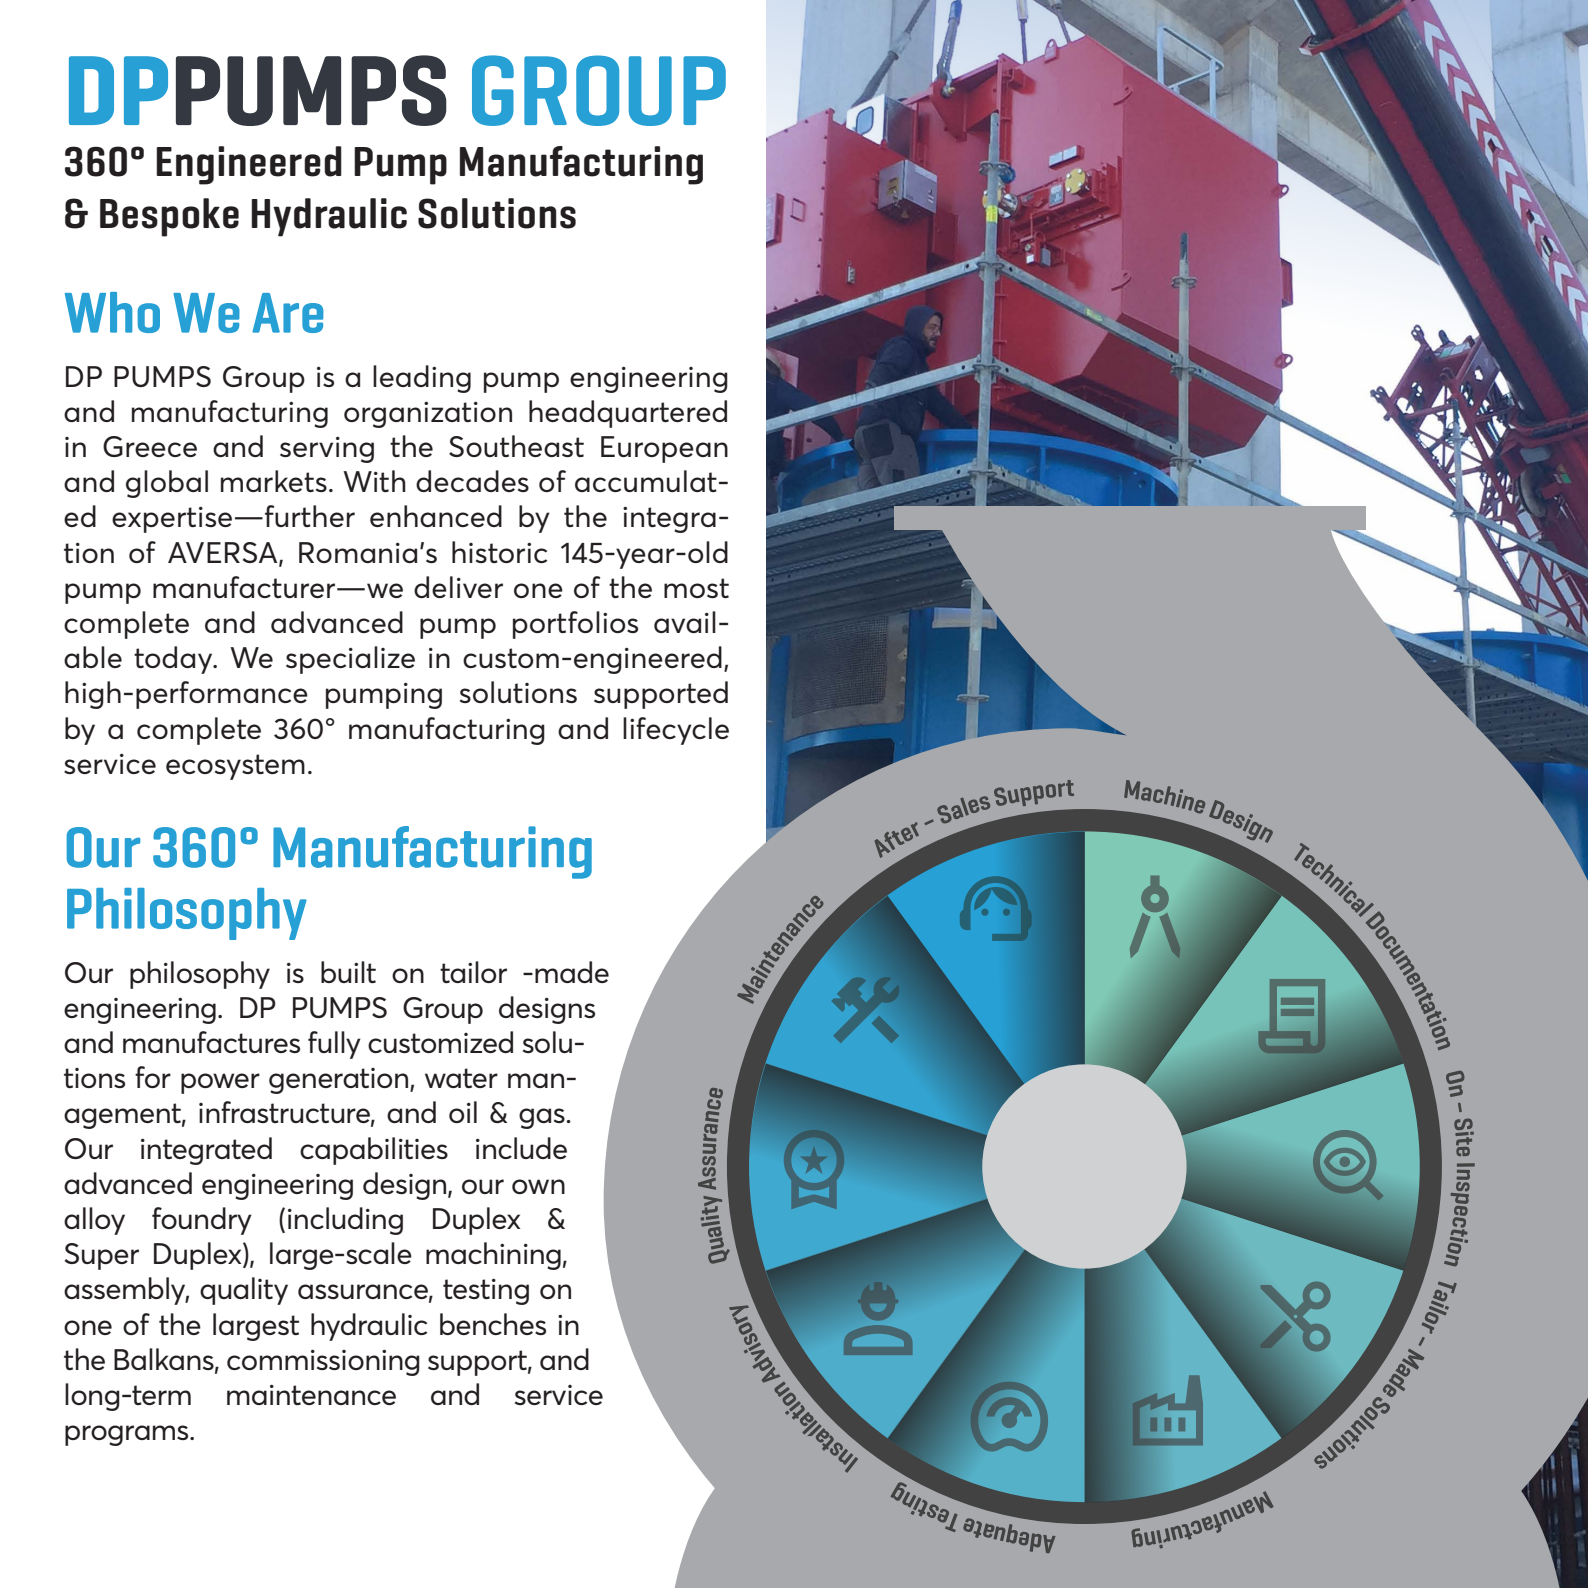
360° Engineered Pump Manufacturing & Bespoke Hydraulic Solutions

Who We Are

DP PUMPS Group is a leading pump engineering and manufacturing organization headquartered in Greece and serving the Southeast European and global markets. With decades of accumulated expertise—further enhanced by the integration of AVERSA, Romania's historic 145-year-old pump manufacturer—we deliver one of the most complete and advanced pump portfolios available today. We specialize in custom-engineered, high-performance pumping solutions supported by a complete 360° manufacturing and lifecycle service ecosystem.

Our 360° Manufacturing Philosophy

Our philosophy is built on tailor -made engineering. DP PUMPS Group designs and manufactures fully customized solutions for power generation, water management, infrastructure, and oil & gas. Our integrated capabilities include advanced engineering design, our own alloy foundry (including Duplex & Super Duplex), large-scale machining, assembly, quality assurance, testing on one of the largest hydraulic benches in the Balkans, commissioning support, and long-term maintenance and service programs.



Water Infrastructure & Irrigation

1

We are a leading provider of pumping systems for large infrastructure projects such as irrigation networks, flood control, drainage, dewatering, and municipal water systems. Our offerings include vertical turbine pumps, mixed flow pumps, vertical propeller pumps, submersible propeller pumps, concrete volute pumps, metallic engineered pumps, and horizontal and vertical split-casing pumps. Floating pump solutions complement our portfolio for water bodies with variable levels.

Power Generation Solutions

2

DP PUMPS Group offers a comprehensive range of centrifugal pumps engineered to meet the safety, reliability, and performance demands of modern power plants, including thermal, CCGT, renewable, and nuclear facilities. Our product range includes vertical cooling water pumps (main & auxiliary), concrete volute pumps, high-pressure boiler feed pumps, condensate extraction pumps, desalination intake pumps, and all auxiliary and miscellaneous pump types such as end-suction, vertical sump, and axial split-casing pumps.

Oil & Gas, Petrochemical & Industrial

3

With AVERSA joining our group, DP PUMPS offers an expanded line of heavy-duty pumps compliant with API 610 standards. These include horizontal process pumps, vertical mixed-flow pumps for cooling, condensate pumps, sump pumps, and fully custom-engineered packages for refineries, petrochemical complexes, offshore platforms, and other demanding industrial applications. Our systems prioritize performance, reliability, and safe long-term operation.

Floating Pump Systems & Water Level Control

4

We provide advanced floating pump platforms and floating water control systems designed for installations where water-level fluctuation or remote conditions make traditional installations difficult. Our solutions include floating pump stations, floating intake systems, modular platforms, automated water-level control, and configurations using axial flow, mixed flow, or submersible pump technologies.Our systems prioritize performance, reliability, and safe long-term operation.

Innovation: HYDROVIO Project

Through Drakos-Polemis Fluidustria, DP PUMP Group is leading the HYDROVIO Project, co-financed by the European Union and Greek national funds under the RESEARCH–CREATE–INNOVATE program. The project develops next-generation reversible pump-hydroturbines featuring high efficiency, improved ecological behavior, and safe fish passage. The program is carried out in collaboration with the Laboratory of Hydraulic Turbomachines (LHT) of NTUA, one of Europe's leading research centers.

Why Choose DP PUMPS Group

- Fully customizable solutions
- True 360° manufacturing capability
- 1882 / 1956 — 145 years of combined heritage DP PUMPS & AVERSA
- In-house foundry & advanced hydraulic test bench
- API 610 expertise for oil & gas
- Proven performance in global high-demand projects
